# Reha Flex

therapy pants

## EXTRA FLEXIBLE OPENING VARIANTS for the highest demands

The high quality 4-way zip on each leg allows easy, comfortable access to the leg and hip without the patient having to remove the trousers.

### OPENING ON ONE SIDE at the upper and lower waistband

Large-scale access to the upper and/or lower leg

### CENTRAL OPENING on the leg and additionally on the leg band

Practical access to orthosis, wound drainage, urine bag, compression stocking or also for lymphoedema treatment

### OPENING ON BOTH SIDES at the upper waistband

Allows the trousers to be folded down on both sides for easy access to the hip region. Easy change of incontinence material.

## CHALLENGING SITUATIONS require special support

### For rehabilitation and physiotherapy

- Often makes taking off the trousers unnecessary
- Increases the patient's comfort factor during hip and leg treatment

### In the clinic and after injuries

- Enables comfortable wearing of trousers despite bandage, splint, orthosis or cast
- Easy access to the injury
- By the way: Wound drainage on the leg or hip is also no problem

### For incontinence

- Quick and convenient access to catheters and inserts without having to undress
- Easy emptying of leg bags by creating an opening in the trouser leg
- Improved air circulation and thus better microclimate by creating different openings on the trousers

Unlimited flexibility thanks to  
**4-WAY ZIP**

### In everyday care

- Convenient change of incontinence care possible
- quick access to compression stockings
