

Body

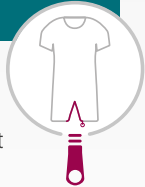

# Bodysuits

item no. 4698  
item no. 4697

The inner side **leg zipper** allows an easy placement or control of the disposable incontinence material without completely undressing the patient.

- the body fixes the disposable material and protects the patient from cooling down

## bodysuit with leg-zipper

size	unisex: S - XXL
colour	white
item no.	4697 001- short-sleeved
item no.	4698 001- sleeveless

colour	grey
item no.	4697 013 - short-sleeved
item no.	4698 013 - sleeveless

item no. 4695  
item no. 4696

Restless patients better wear a body with a **back zipper**. It prevents these people from undressing themselves or removing the incontinence material.

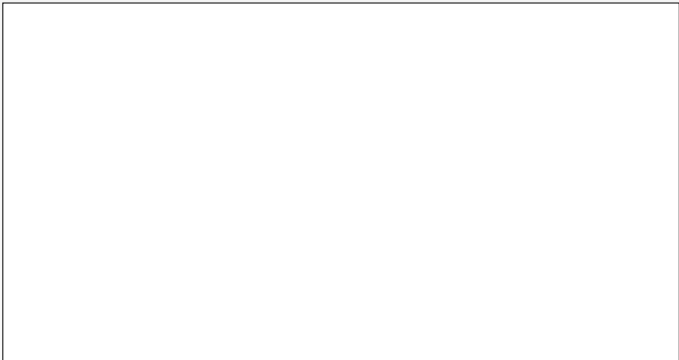

- the body fixes the disposable material and protects the patient from cooling down

## bodysuit with back-zipper

size	unisex: S - XXL
colour	white
item no.	4695 001 - short-sleeved
item no.	4696 001 - sleeveless

colour	grey
item no.	4696 013 - sleeveless

09/2022

# Incontinence Clothing

Jumpsuits and Bodysuits

suprima

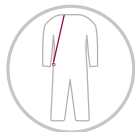

Simply a better quality of life.

## Adapted Clothing for Elderly and Disabled Seniors

Many people lose motor skills with age. Consequences are restrictions of the musculoskeletal system or incontinence. These people need help getting dressed and grooming.

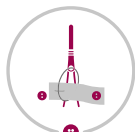

If arms and legs are no longer mobile, everyday wear is difficult to put on - even with support. Physical ailments such as incontinence require special clothing openings.

suprima jumpsuits and bodysuits have corresponding zippers to make dressing, personal hygiene and changing of incontinence aids easier - for patients and care givers.

### Back Zipper

The diagonal back zipper prevents pressure points on the spine. It allows the best access to the upper body of the patient for body care. It is not possible for the patient to undress him- or herself.

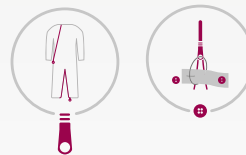

### Leg Zipper

The inner side leg zipper allows an easy replacement or control of incontinence pads, compression stockings or wound dressings without completely undressing the patient.

A button fastener security on the zipper makes it difficult for the patients to undress themselves and to remove diapers and pads.
